

Amendments to the Specification

Please amend paragraph [0004] as follows:

The method and structure of the present invention squarely address these and other prior-art imaging-driver installation and configuration issues. They do so in a special manner (mentioned briefly above), wherein the correct driver, which comes embedded with an installable imaging device, along with the likewise embedded driver-configuration information, are directly downloaded as a pair, in what is referred to herein as a single event, from the imaging device to a requesting client device.
